

1 To release A-CLIP from B-CLIP, push center button on A-CLIP and slip apart.

To release C-CLIP from B-CLIP, squeeze sides on C-CLIP inward and pull apart.

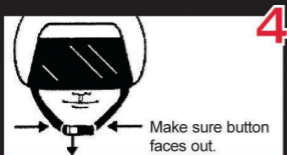

2 Place C-CLIP around D-Rings side of helmet straps.

(You can also slip C-CLIP through loop on strap if loop is not sewn tight)

Snap C-CLIP into B-CLIP to secure.

3 Weave the chin strap of the helmet into the A-CLIP to secure. If the chin straps are thin, wrap several times around teeth of A-CLIP to secure properly.

4 Snap A-CLIP into B-CLIP until you hear a click sound to fasten the helmet on head.

NOTE: Make sure the button on A-CLIP is facing away from the chin.

NOTE: If your helmet strap has a snap on the end, you will need to cut the snap off in order to install the Speed Clip. The strap can then be singed with a match to prevent fraying after being cut.
